

Welcome

Screw**C**orner wurde gegründet um Sie bei der Restaurierung Ihrer Klassischen Automobile und Motorräder zu unterstützen. Ich restauriere selbst und habe mich lange darüber geärgert, dass es keinen Anbieter für Zollschrauben gibt dessen Sortiment nicht nur auf VA Schrauben beschränkt ist. In diesem Katalog finden Sie Schrauben, Muttern, etc in Stahl, -verzinkt, in blau und in gelb chromatiert. Natürlich auch in Edelstahl. Leider ist so ein gedruckter Katalog schon kurz nach Erscheinen veraltet, da ich mein Sortiment ständig erweitere. In naher Zukunft wird das Angebot im Bereich BSF, BSW, BA und BSCy stark erweitert. Deshalb finden Sie unter www.scewcorner.com ständig eine aktuelle Version. Für Tipps und Anregungen bin ich jederzeit offen.

Viel Erfolg beim Reparieren und Restaurieren Ihres Klassikers.

Ihr Volker Meuer

Welcome

Screw**C**orner was established to provide a fastener service to restorers of automobiles and motorcycles, both amateur and professional. Our Catalog is packed full of nuts, bolts, screws, thread repair tools, handtools etc.

Das identifizieren eines Zollgewindes ist sehr einfach.

Man braucht dazu nur folgende Eigenschaften:

1. Schrauben- oder Muttertyp
2. Das Material
3. Den Gewindedurchmesser
4. Die Gewindelänge
5. Die Anzahl der Gewindegänge / inch (25,4 mm)

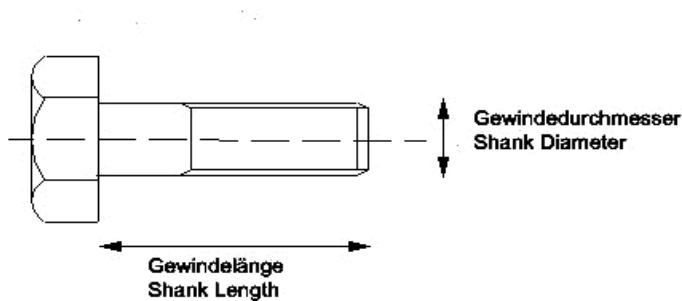

Anders als bei metrischen Gewinden, mißt man bei Zollgewinden nicht den Abstand von einem Gewindegang zum nächsten, sondern die Anzahl der Gewindegänge pro Zoll Gewindelänge.

Identifying the thread of a bolt or a screw is very easy.

To identify a bolt or screw you need five attributes:

1. Type
2. Material
3. Diameter
4. Length
5. Number of threads per inch (Tpi).

These results are compared to information on a thread chart to identify the thread type. (see next page)

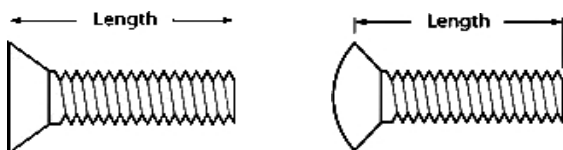

Messen der Gewindelänge

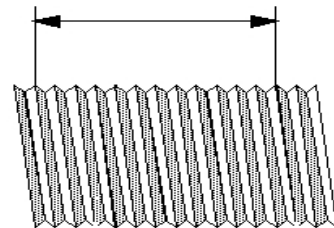

Bei Schrauben bei denen der Kopf in der Regel nicht versenkt ist, mißt man die Schraubenlänge vom Gewindeanfang bis unterhalb der Schraubenkopfes.

Bei Senkschrauben wird die Gesamtlänge gemessen.

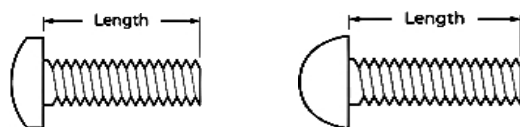

Gewindegänge / Zoll (25,4 mm)
Treads per Inch

Measuring Fastener Length

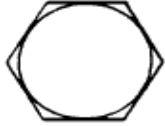

For fasteners where the head usually sits above the surface, the measurement is from directly under the head to the end of the fastener.

For fasteners that are designed to be countersunk, the measurement is made from the point on the head where the surface of the material is, to the end of the fastener.

Bei amerikanischen Schrauben wird die Festigkeitsklasse durch Markierungen auf den Schraubenkopf angegeben.
